

The nature of the universe is change
That's why the nature of science is change
Ideas are supported (NOT PROVEN) with evidence
 Sometimes mountains
 Sometimes molehills
Until some new evidence
Or more sophisticated measurement technique
Or aptly designed investigation
Comes along.
Public outcry
That scientists are always changing what's true
Is a lack of understanding
Of the process of gathering knowledge
About the universe

2015?2016?
